Re: Application for Senior Salesforce Developer

Dear Hiring Team,

I am writing to express my interest in the **Senior Salesforce Developer** position supporting a leading Australian Government organisation. I bring more than thirty years of experience across software engineering, enterprise platform architecture, delivery governance, and large-scale digital transformation, with recent hands-on Salesforce leadership spanning Apex, Lightning Web Components, Flow, Service Cloud, Sales Cloud, integrations, automation, and DevSecOps. I am confident I can help deliver secure, accessible, maintainable Salesforce solutions that meet business needs and government-grade quality expectations.

In my recent role as Release Manager and Technical Lead at Origin Energy, I led Salesforce development, optimisation, release governance, and integration initiatives across enterprise Sales Cloud and Service Cloud environments. My work included architecting custom batch and scheduling frameworks, refactoring complex Apex triggers, flows, and platform automation to resolve performance bottlenecks, improving system reliability, and reducing operational incidents by 90%. I have also built bespoke digital applications for community and nonprofit organisations, applying Lightning Web Components and Experience Cloud-style patterns to create practical, user-focused services.

My background aligns strongly with the requirements of this engagement:

- **Salesforce Engineering:** I have designed, developed, tested, and supported enterprise Salesforce solutions using Apex, Flow, Lightning Web Components, platform configuration, asynchronous processing, and reusable architecture patterns.
- **Integration and API Delivery:** I have delivered integrations between Salesforce and external platforms including Gentrack Velocity and Zuora, using REST APIs, Platform Events, resilient error handling, and scalable integration patterns.
- **DevSecOps, Testing, and Release Quality:** I established Salesforce DevSecOps practices with GitHub Actions, regression automation, Snyk compliance checks, pipeline governance, code reviews, and quality gates, helping move delivery from fortnightly manual releases toward automated deployments achievable every 15 hours.
- **Collaboration, Accessibility, and Maintainability:** I work effectively with business analysts, solution architects, testers, delivery teams, and stakeholders to translate requirements into scalable solutions, while maintaining strong focus on secure, maintainable, accessible, and user-centred digital services.

I am also familiar with regulated enterprise environments and understand the importance of platform standards, inclusive design principles, disciplined release practices, and clear stakeholder communication. The hybrid arrangement is suitable for me, with a preference for the Richmond site and flexibility to attend Geelong when required.

Thank you for your time and consideration. I would welcome the opportunity to discuss how my Salesforce engineering, integration, DevSecOps, and enterprise delivery experience can support the organisation's digital service outcomes.

Yours sincerely,

Efraim Taranto
