Re: Enterprise Systems Governance & Enablement Manager

Dear Hiring Team,

I am applying for the Enterprise Systems Governance & Enablement Manager position at Jewish Care Victoria. Across more than 30 years in enterprise platforms, digital transformation, architecture, delivery and business improvement, I have helped organisations align systems, processes, data and people to achieve measurable outcomes. I establish governance and operating models that define meaningful measures, make performance visible and turn evidence into prioritised action. This data-led approach, combined with my experience managing competing priorities and translating complex needs into sustainable improvements, closely matches the role's enterprise-wide mandate.

At Origin Energy, I established a Salesforce DevSecOps and release operating model across operational teams, delivery partners, vendors and multiple environments. I introduced governance, intake pathways, standardised processes, automation and shared ownership, supported by measures for deployment frequency, incidents, risk and delivery performance. These insights guided priorities and corrective actions, replacing an unstructured fortnightly change-set process with a reliable pipeline capable of deployment every 15 hours. I also used incident and workflow data to target improvements across Sales and Service Cloud, reducing duplication, manual effort and operational risk and contributing to a 90% reduction in reported incidents. This work required me to prioritise enhancements, manage risks and dependencies, coordinate user acceptance testing and business readiness, and report evidence-based recommendations and outcomes to senior stakeholders.

I have worked across Salesforce Sales Cloud, Service Cloud and NPSP, PeopleSoft CRM and ERP, Vantive, Clarify, SAP and bespoke systems, giving me experience across a diverse enterprise application landscape. My process-improvement approach begins with data: establishing baselines, identifying meaningful measures, validating data quality, analysing trends and translating findings into actions whose benefits can be tracked. My analytics experience spans Cognos BI and ETL, Power BI, Salesforce Analytics and Data360, enabling me to connect operational workflows with trusted visualisation and decision support. I would bring Jewish Care a pragmatic approach to measurable system roadmaps, evidence-based enhancement backlogs, benefits realisation, documentation, knowledge sharing and super-user networks. During COVID-19, I provided Salesforce support for CCare, Maccabi Victoria and NCJWA, I have also provided technical guidance and hands-on development in community-focused, not-for-profit environments.

I would welcome the opportunity to discuss how my experience in enterprise systems governance, stakeholder enablement and data-led improvement could help Jewish Care strengthen system adoption, prioritise investment and translate reliable measures into actions and demonstrable business outcomes.

Kind regards,

Efraim Taranto
