Re: Salesforce Technical Lead

Dear Tom,

I am writing to apply for the Salesforce Technical Lead opportunity at RACV. With more than 30 years' experience across software engineering, architecture and complex technology delivery, including eight years leading Salesforce release, engineering and optimisation work at Origin Energy, I offer the combination of hands-on technical depth, pragmatic leadership and delivery discipline RACV is seeking.

At Origin, I provided hands-on technical leadership across Salesforce Sales and Service Cloud, including support for Apttus and Vlocity. My work covered solution design, Apex, Flow, integration mapping, data validation, release coordination and defect resolution, in close partnership with business, architecture, testing and vendor teams. I also delivered Sales Cloud performance improvements that resolved 90% of reported incidents and created capacity for platform growth, and architected an automated order scheduler supporting more than 50,000 LPG delivery points and saving over 3,000 operational hours annually.

I have also built and led the engineering practices needed to deliver securely at pace. I established a Salesforce DevSecOps capability that transformed an unstructured fortnightly change-set process into a hybrid automated CI/CD pipeline capable of deployment every 15 hours. The approach embedded peer review, business approval, regression testing and Snyk compliance checks. Alongside this, I have designed integrations using Platform Events, REST APIs, asynchronous processing and robust error handling, and I bring broader enterprise integration experience across middleware and complex CRM and ERP environments.

RACV's emphasis on secure, scalable solutions, engineering excellence and continuous improvement strongly aligns with how I lead. I am comfortable running design sessions and code reviews, identifying technical debt, setting production standards and mentoring developers and administrators. My community Salesforce work further demonstrates this approach: I designed and administered tailored Sales Cloud, Service Cloud and NPSP solutions, developed Lightning Web Components and coached no-profit teams to build sustainable internal capability.

I would welcome the opportunity to discuss how my Salesforce leadership, architecture, integration and DevSecOps experience could help RACV deliver dependable customer and member solutions across its platform landscape. Thank you for considering my application.

Kind regards,

Efraim Taranto
