Re: Salesforce Administrator / Developer – Service & Loyalty Cloud

Dear Mae,

I am applying for the Salesforce Administrator / Developer – Service & Loyalty Cloud position with MECCA. I offer extensive hands-on Salesforce experience across administration, solution architecture, custom development, integration, automation and release management, supported by Salesforce Platform Administrator and Platform Developer certifications. I am skilled at translating business requirements into stable, secure and maintainable platform solutions.

At Origin Energy, I led hands-on work across Salesforce Sales and Service Cloud, delivering configuration, Apex, Flow, integration mapping, data validation and defect resolution. I built integrations using REST APIs, Platform Events and asynchronous processing; refactored triggers and flows across order, account, asset and invoicing processes, resolving 90% of reported incidents; and developed an automated order scheduler serving more than 50,000 delivery points while reducing annual manual configuration by more than 3,000 hours.

I also established a Salesforce DevSecOps capability that transformed a fortnightly change-set process into a hybrid automated CI/CD pipeline capable of deployment every 15 hours, with peer review, regression testing, security checks and business approval. In community organisations, I administered Service Cloud, Sales Cloud and NPSP solutions, built Lightning Web Components and Visualforce interfaces, segmented supporter data and created campaign workflows, experience directly relevant to customer service, member data, engagement journeys and sustainable platform ownership.

I would welcome the opportunity to bring this combination of technical depth, pragmatic delivery and stakeholder partnership to MECCA Brands. I am confident I can contribute quickly across Service Cloud administration, custom development, integrations, CI/CD, incident remediation and platform health while building further depth in Loyalty Cloud. I am also currently preparing to expand my expertise in Salesforce Data Architecture and AI, strengthening my ability to design scalable, well-governed data models that support trusted customer and loyalty experiences.

Kind regards,

Efraim Taranto
