Re: Lead Technical Systems Analyst

Dear Julien,

I am applying for the Lead Technical Systems Analyst opportunity with your energy-retail client. With more than 30 years of experience across systems engineering, architecture, software delivery and enterprise platforms, including over eight years at Origin Energy and earlier utilities experience at Jemena, I offer the combination of hands-on technical depth, operational ownership and pragmatic leadership this 2IC role requires.

At Origin, I established and operated a Salesforce DevSecOps capability, transforming an unstructured fortnightly release process into a hybrid automated CI/CD pipeline capable of deployment every 15 hours. I coordinated releases, reviewed and approved production changes, aligned UAT with Production, resolved defects and worked across business, architecture, testing, development and vendor teams to deliver reliable outcomes. This included hands-on optimisation that closed 90% of reported incidents and created capacity for platform growth.

My technical background aligns strongly with the role's integration focus. I have designed and delivered solutions using REST APIs, Platform Events, asynchronous processing, integration mapping, data validation and robust error-handling patterns, including Salesforce integration with Gentrack Velocity in an energy-retail environment. Earlier utilities and enterprise work also covered WebMethods, IBM MQSeries, SAP IS/U and complex data flows. I am comfortable analysing payloads, dependencies and failure points, translating findings into clear requirements, implementation-ready work and production-readiness decisions using Jira and disciplined documentation.

I would bring a calm, accountable approach to owning the operations queue, setting clear priorities and giving development teams precise direction with no ambiguity. I am equally comfortable working in the detail when systems fail, leading implementation across complex platforms, and stepping up to represent the DevSecOps function. While my middleware experience spans adjacent technologies rather than specifically Boomi and Solace, the underlying API, messaging and integration patterns are well established in my background, and I adapt quickly to new platforms.

I would welcome the opportunity to discuss how my energy-sector experience, technical leadership and hands-on delivery background could support your client's Digital and Technology team.

Kind regards,

Efraim Taranto
