Re: Salesforce DevOps Engineer

Dear Hiring Team,

I am applying for the Salesforce DevOps Engineer role with State Trustees. My background aligns closely with the role's focus on Salesforce platform operations, release governance, automation, environment management and continuous improvement. I bring practical experience delivering secure, reliable Salesforce change in mature enterprise environments that support critical services.

At Origin Energy, I established Salesforce DevSecOps capability from the ground up, introducing Gearset and later transitioning release management to AutoRabit. I also developed a custom release orchestration application using GitHub Actions, peer review, repository-based business approval, regression testing and Snyk compliance controls. This improved release governance and provided a controlled, repeatable process usable by both technical and non-technical stakeholders.

I have delivered substantial Salesforce platform optimisation across Sales Cloud triggers, flows, order management, account management, points of delivery, assets and custom invoicing integrated with Zuora. This work resolved performance constraints, reduced reported incidents by 90%, and supported continued platform growth. I also implemented an automated order scheduler for more than 50,000 delivery points, eliminating more than 3,000 hours of annual manual configuration effort.

Across Salesforce Sales and Service Cloud, I have worked as an architect, developer, administrator, release lead and technical problem solver. My experience includes Flow, Apex, configuration, environment coordination, defect resolution and integrations using Platform Events, REST APIs, asynchronous processing and structured error-handling patterns. I have also improved delivery assurance through Salesforce test classes and Selenium-Cucumber UAT automation, reducing manual testing effort and late-cycle delivery risk.

I note the role refers to Salesforce Administrator, Advanced Administrator or equivalent certification. While I do not currently hold that credential, I offer equivalent practical experience across Salesforce administration, release management, operational support and delivery in mature enterprise environments, and I am prepared to obtain the certification if required.

Thank you for considering my application. I would welcome the opportunity to discuss how my Salesforce DevOps, automation, release management and platform engineering experience could support State Trustees in maintaining a secure, reliable and well-governed Salesforce platform.

Kind regards,

Efraim Taranto
