To: UniSuper Hiring Team

Re: Senior Salesforce Developer

Dear Hiring Team,

I am pleased to apply for the Senior Salesforce Developer role at UniSuper. I was drawn to the opportunity because it combines strong Salesforce engineering with work that supports meaningful outcomes for members. I bring deep Salesforce experience backed by more than 30 years across software development, solution architecture, enterprise platforms, integration, release delivery, and production support. I enjoy working with teams to turn complex problems into practical and timely solutions.

At Origin Energy, I led hands-on Salesforce development and technical design across Sales Cloud and Service Cloud, including Apex, Flow, Lightning Web Components, Platform Events, REST APIs, asynchronous processing, data validation, and defect resolution. I worked closely with business, architecture, testing, vendor, and delivery teams to deliver integrations with Gentrack Velocity and Zuora and convert complex energy-retail requirements into dependable production capability. I also refactored triggers and flows across orders, accounts, points of delivery, assets, and invoicing, reducing reported incidents by 90% and releasing platform capacity attracted by for technical debt.

Alongside that development work, I created a Salesforce DevSecOps capability that brought together CI/CD workflows, peer review, business approval, regression testing, and security checks. This helped move the platform from an unstructured fortnightly change-set process to a hybrid automated pipeline capable of deployment every 15 hours. I believe this balance of engineering depth, delivery discipline, and care for production stability would help me contribute well to UniSuper's Technology & Delivery team.

I also value the human side of technology delivery. Through code reviews, testing practices, release governance, incident resolution, root cause analysis, and cross-functional delivery, I have learned the importance of building trust as well as building software. I enjoy mentoring developers and administrators, lifting development standards, and helping teams create solutions that are reliable, maintainable, and genuinely useful for the people who rely on them.

I would welcome the opportunity to bring my Salesforce development, integration, platform optimisation, DevSecOps, and mentoring experience to UniSuper. I am especially interested in contributing to a team that values genuine care, working better together, and delivering outcomes that matter to members.

Kind regards,

Efraim Taranto
