Re: Senior Salesforce Infrastructure Engineer

Dear Vaibhav,

I am pleased to apply for the Senior Salesforce Infrastructure Engineer role with Hays. My background spans technology delivery, engineering, architecture, enterprise platforms and transformation, with a strong focus on building reliable platform environments, supporting business-critical systems, and working across technical and business stakeholders to deliver sustainable outcomes.

The opportunity is particularly appealing because it combines hands-on Salesforce environment management with leadership, governance, release discipline and continuous improvement. I bring a practical engineering mindset, strong stakeholder engagement skills and experience supporting enterprise-grade digital platforms where security, stability, scalability and delivery cadence are all critical. I am comfortable working closely with developers, architects, testers, cyber security specialists, business analysts and project teams to resolve issues, improve platform performance and support both project and BAU delivery.

Across my career I have led and contributed to complex technology initiatives involving environment planning, platform operations, change management, release coordination, automation opportunities and governance. I understand the importance of disciplined CI/CD practices, clear code and environment management strategies, effective prioritisation, and robust controls around access, compliance and operational risk. These are the same foundations required to support a complex Salesforce ecosystem and ensure it remains dependable for end users and business programs.

I also offer the communication style and delivery focus needed in a senior infrastructure engineering role. I am confident engaging with diverse stakeholders, translating technical issues into clear options, supporting team members through mentoring and problem solving, and maintaining momentum across competing priorities. I would welcome the opportunity to bring this experience to Hays and contribute to the continued optimisation, security and reliability of the Salesforce platform.

Thank you for considering my application. I would welcome the opportunity to discuss how my technology delivery, enterprise platform and stakeholder leadership experience can support the needs of this role.

Kind regards,

Efraim Taranto
