Re: Application for Senior Salesforce Developer

Dear Recruitment Team,

I am applying for the Senior Salesforce Developer with System Administration Skills position supporting the ACT Government directorate. I bring more than 30 years of experience across systems engineering, enterprise platform architecture and software development, including substantial Salesforce delivery experience. This background equips me to design, build, administer and govern secure, scalable and maintainable enterprise applications that support digital transformation and community-facing services.

My Salesforce experience spans both programmatic and declarative delivery, with particular strengths that align with several of the role's core requirements:

- **Development and customisation:** I have hands-on experience designing, building and enhancing enterprise Salesforce solutions using Apex, Lightning Web Components, Visualforce and Salesforce Flow, selecting programmatic or declarative approaches according to solution complexity, maintainability and platform constraints.
- **Platform administration and security:** I have managed users, permissions, security settings, metadata and platform configuration, applying access-control, data-protection and governance practices to maintain secure and supportable Salesforce environments.
- **Integrations and architecture:** I have engineered enterprise integrations between Salesforce and external systems using REST APIs, Platform Events and asynchronous processing patterns, with attention to secure interfaces, resilient error handling and maintainable architecture.
- **CI/CD and release management:** I am proficient in Git-based source control and automated deployment pipelines. I have established DevSecOps workflows using GitHub Actions and automated quality gates, experience that is transferable to controlled Salesforce deployments in Azure DevOps or comparable tooling.

Most recently, as Release Manager and Technical Lead at Origin Energy, I combined technical leadership with hands-on optimisation across Salesforce Sales Cloud and Service Cloud. I refactored complex triggers and flows to remove performance bottlenecks, contributing to a 90% reduction in reported incidents. Earlier assignments included bespoke Salesforce applications for non-profit and community organisations, covering fundraising interfaces, data segmentation and volunteer-coordination workflows.

I hold a bachelor's degree in Systems Engineering and a postgraduate qualification in Business Administration, and I have achieved Salesforce Trailhead Ranger status. I am an Australian citizen, available to commence promptly, and willing to complete the required police check and compliance verification.

My current Salesforce certifications are detailed in my resume and can be verified as part of the application process.

Thank you for considering my application. I welcome the opportunity to discuss how my Salesforce engineering, platform administration and release leadership experience can support secure, maintainable applications for the ACT Government's field-based and community-facing services.

Yours sincerely,

Efraim Taranto
