Re: Application for Technical Solution Engineer (Salesforce)

Dear Hiring Team,

I am writing to apply for the Technical Solution Engineer (Salesforce) role at Telstra Health. I bring more than 30 years of software engineering and solution architecture experience, including deep hands-on Salesforce expertise and a strong record of translating complex customer needs into practical, scalable solutions. My combination of technical leadership, platform engineering and stakeholder engagement would enable me to lead discovery, shape credible solutions and demonstrate how Telstra Health's technology can improve connected care.

Throughout my career, I have combined technical architecture with customer-facing delivery, turning complex operational requirements into scalable and reliable platform capabilities. As Release Manager and Technical Lead at Origin Energy, I led solution architecture and hands-on development across Salesforce Sales Cloud and Service Cloud. I designed event-driven integration patterns using REST APIs and Platform Events, refactored declarative and programmatic logic to eliminate 90% of operational incidents and developed an automated scheduling engine supporting more than 50,000 points of delivery. I have also built community and health-support applications for non-profit organisations using Salesforce NPSP and Service Cloud, including food-allocation calculation engines and volunteer-coordination workflows. These experiences have strengthened my ability to lead technical discovery, explain platform possibilities clearly and shape solutions around measurable customer outcomes. My experience supports the key requirements of this role:

- **Salesforce platform and solution architecture:** Deep hands-on proficiency in Apex, Lightning Web Components, Flow and asynchronous processing, with strong knowledge of governor limits, platform configuration and extensible solution architectures. This foundation enables me to work effectively with packaged Salesforce products and assess where configuration, extension and integration are the most appropriate approaches.
- **Technical discovery and demonstrations:** Proven ability to analyse workflows, uncover technical and operational constraints, and translate findings into functional prototypes and tailored demonstrations. I communicate complex platform possibilities clearly to executive and technical stakeholders, helping teams evaluate options, risks and practical next steps.
- **Enterprise integration and data architecture:** Extensive experience designing secure REST API integrations, event-driven messaging and data models that connect Salesforce with transactional back-end systems. I focus on resilient interfaces, clear data ownership and scalable patterns that support reliable services in complex operating environments.
- **Cross-functional collaboration:** Demonstrated success working with sales, product, technology and delivery teams to shape opportunities, define implementation scope, develop technical estimates and establish architectural governance. I am comfortable bringing specialists together, resolving trade-offs and presenting a coherent technical approach to senior and technical stakeholders.

My bachelor's degree in Systems Engineering, postgraduate qualification in Business Administration and Salesforce Trailhead Ranger status complement my practical engineering experience. I am particularly motivated by Telstra Health's focus on connected solutions that help healthcare and community-service teams deliver safer, faster and more seamless care. The opportunity to apply my Salesforce expertise to products with meaningful public impact strongly aligns with the work I want to pursue.

Thank you for considering my application. I would welcome the opportunity to discuss how my Salesforce engineering depth, solution architecture experience and customer-facing approach could help Telstra Health shape compelling solutions and deliver better connected-care outcomes.

Yours sincerely,
Efraim Taranto
