To: Kumar Kuchipudi, NTT Ltd

Re: Integration Engineer – Melbourne

Dear Kumar,

I am writing to apply for the Integration Engineer contract with NTT Ltd. I bring more than 30 years of experience across systems engineering, solution architecture, software delivery, enterprise platforms and integration, including extensive hands-on Salesforce work in complex, multi-vendor environments. The opportunity to support a major CRM and Billing transformation strongly aligns with my recent experience in energy retail and enterprise integration delivery.

At Origin Energy, I provided technical leadership for Salesforce Sales and Service Cloud integrations with Gentrack Velocity using Platform Events, REST APIs, asynchronous processing and robust error-handling patterns. I worked across solution design, integration mapping, data validation, testing, release coordination and defect resolution, partnering closely with business, architecture, testing and vendor teams to translate complex energy-retail requirements into reliable production capability. I also led Data360 integration with an external telemetry platform to enable near-real-time consumption measurement and delivered Salesforce invoicing integrations with Zuora.

My broader background includes enterprise integration across CRM, billing, ERP and data platforms, with technologies and patterns spanning Salesforce, PeopleSoft, SAP IS/U, WebMethods, IBM MQSeries, Microsoft APIs and custom data flows. I have coordinated dependencies across internal and third-party systems, established delivery and operational standards, and supported testing, deployment and post-release stabilisation. I also created a Salesforce DevSecOps capability that transformed an unstructured release process into a secure hybrid CI/CD pipeline, strengthening traceability, quality and deployment frequency.

While my recent focus has been Salesforce-led integration, I offer strong transferable integration engineering capability, deep Microsoft ecosystem experience and a proven ability to work effectively with systems integrators and specialist vendors. I am comfortable operating across API-led and event-driven architectures, data ingestion, observability, security, testing and production support. Based in Melbourne, I am well suited to the mostly remote arrangement and available for occasional travel to regional south-west Victoria.

I would welcome the opportunity to discuss how my Salesforce, enterprise integration and transformation delivery experience could contribute to a robust, secure and supportable integration landscape for NTT and its client.

Kind regards,

Efraim Taranto
