

Not-for-profit technology and Salesforce NPSP experience

I have supported Jewish and community not-for-profits use practical technology to strengthen operations, improve service delivery and deepen stakeholder engagement. My most substantial engagements have been with Maccabi and C Care, where I delivered solutions spanning Microsoft 365, Salesforce and connected platforms.

Maccabi: enabling remote operations and improving member engagement during COVID-19

When remote-work requirements took effect in March 2020, I moved Maccabi's server data to OneDrive, installed a NAS backup, consolidated its membership records and established Salesforce as the organisation's single source of truth. For its 2021 and 2022 donation campaigns, I then built a web interface through which volunteers could make calls and process donations using Salesforce Campaigns and native Salesforce segmentation. The model was later shared with NCJWA, where I supported the system administrator and assisted during the campaign.

My work with Maccabi also included Microsoft 365 administration, user enablement and training in SharePoint and related applications, together with support for Salesforce adoption.

C Care: streamlining recipient support and volunteer coordination

At C Care, I consolidated recipient data in Salesforce, automated the calculation of frozen-food requirements by household and prepared food-parcel allocations for volunteer distribution. I also created a page that allowed pantry recipients to customise staple items according to their needs. Integrations among NPSP, Volunteers for Salesforce, WordPress and Zapier strengthened volunteer self-sign-up and improved capacity management.

Additional not-for-profit support

I have also supported FOJAM, Souper Kitchen and Beit Raphael through smaller technology projects, user enablement and customer migrations. At Beit Raphael, I helped its former CEO, Shimon Allen Z"L, develop his computer literacy, strengthening his ability to use the organisation's technology independently.

Commitment to the not-for-profit sector

I understand the operational pressures facing volunteers, donors and recipients, and I focus on practical solutions that help not-for-profits deliver their missions effectively. I can also navigate State and Federal grant programs and frame IT projects in terms of operational need, expected benefits and funding outcomes.
