Executive Profile

Technology and delivery professional with 30+ years' experience across systems engineering, architecture, software engineering, enterprise platforms, automation, and complex program delivery. Combines hands-on technical depth with pragmatic leadership to translate business needs into commercially effective solutions. Proven in Waterfall, Agile, and hybrid environments, with strengths in stakeholder alignment, delivery acceleration, and complex problem solving under pressure.

Core Capabilities

- **Architecture & engineering**: System and solution architecture; software design and development; integration; commercial application of emerging technologies.
- **Development**: Java; C#; VB.NET; VBA; .NET ecosystem; strong analytical, automation, and problem-solving capability.
- **Enterprise platforms**: Salesforce specialist; PeopleSoft CRM and ERP solutions; deep expertise across Microsoft productivity tools.
- **Quality and delivery**: Test automation and management; project, release, and iteration management; requirements engineering; consulting; delivery across complex Waterfall, Agile, and hybrid environments within tight timeframes.
- **Leadership & collaboration**: Clear communication; teamwork; enthusiasm; honesty; empathy; flexibility; adaptability; creativity; leadership by example.

Selected Career Highlights

- Led development squads of up to six developers, providing hands-on technical direction, establishing well-documented development standards supported by automation, and mentoring teams to deliver scalable, maintainable Salesforce solutions.
- Democratised Salesforce release management at Origin by building a custom application that orchestrated CI/CD workflows using GitHub Actions, AI guardrails, and documentation.
- Optimised Salesforce Sales Cloud by refactoring triggers and flows affecting order management, accounts, points of delivery, and invoicing, reducing reported incidents by 90% and creating capacity for platform growth.
- Developed an order scheduler in Salesforce for Origin, serving more than 50,000 points of delivery by combining delivery schedules with daily batch execution and reducing annual manual configuration by more than 3,000 hours.
- Enabled a COVID-19 pro bono response using Salesforce NPSP to calculate household food allocations and coordinate volunteer deliveries through V4S.
- Consolidated program management reporting across multiple project platforms, reducing weekly reporting effort from approximately eight hours per project manager to a consolidated saving of around 60 project management hours per week.

Professional Experience

Salesforce Technical Leader | Origin Energy

Melbourne | Feb 2018 – June 2026

- Provided technical leadership for the delivery of Salesforce across 5 different organisations serving 7 business units, working with business stakeholders, architects, vendors, testers, delivery teams, and product owners to translate complex operational and customer challenges into practical solutions spanning order management, customer accounts, points of delivery, assets, invoicing, and enterprise integrations; while ensuring operational resilience and response to Incidents.
- Took a hands-on technical lead role within a squad of 4 developers, a tester, and a business analyst to improve the performance and stability of Sales Cloud and Service Cloud. Refactored legacy Apex and Flow implementations and resolved underlying platform constraints, reducing

system overhead and governor-limit pressure, helping close 90% of reported incidents, and creating capacity for continued business growth.
- Lead the implementation of Data360 for LPG Scheduling allowing to unify the information coming from salesforce and cross it with a Snowflawke external database containing the telemetry information
- Designed and built an automated Salesforce order-scheduling solution supporting more than 50,000 LPG delivery points. Combined configuration-driven scheduling, business rules, and batch processing to generate delivery orders automatically, improve ordering accuracy, and eliminate more than 3,000 hours of manual configuration each year.
- Defined and architected a Data360-centric solution to unify the Origin Business LPG sales process, connecting acquisition, retention, field sales, lead revival, customer analytics, and segmentation. The design used Salesforce Sales Cloud, Data360, and Segment Builder and established a clear path to migrate marketing capabilities to Agentforce Marketing Cloud.
- Designed secure and resilient integration patterns connecting Salesforce with Gentrack Velocity, digital customer platforms, telephony solutions, and enterprise services using Platform Events, REST APIs, asynchronous processing, integration mapping, data validation, and robust error-handling frameworks.
- Managed development squads across multiple teams, introduced Agile Scrumban practices, guided technical decisions, mentored developers and delivery teams, and contributed to architectural governance. Established well-documented development standards reinforced by automated quality controls to improve consistency, maintainability, and delivery discipline. Also transformed release management across multiple Salesforce environments by architecting a DevSecOps capability with a custom orchestration application, GitHub Copilot-enabled peer review, automated regression testing, Snyk security scanning, and repository-based approvals—replacing a largely manual fortnightly change-set process with a governed CI/CD pipeline capable of deployment every 15 hours.

Salesforce Iteration Manager | JB Hi-Fi

Melbourne | July 2016 – January 2018

- Led a cross-functional Salesforce squad of three developers, a tester, and a Salesforce administrator, providing technical direction, coordinating delivery priorities, and supporting consistent execution across development, testing, and platform administration.
- Led and supported the architecture and delivery of JB Hi-Fi's first B2B integration between Salesforce Sales Cloud and an external customer procurement system, enabling customers to purchase electronics through self-service workflows while reducing manual processing for both organisations.
- Established an automated testing framework using Cucumber and Java to strengthen the JB Hi-Fi regression suite. Extended the framework with JMeter for low-level performance testing and scaled it through BlazeMeter to simulate 50,000 concurrent connections, validating platform resilience and release readiness for peak trading events including Black Friday and Boxing Day.
- Led phase one of the BYOD project, delivering the customer-facing contract and pricing capabilities that enabled JB Hi-Fi to establish specialised agreements with educational institutions and offer devices at discounted prices.
- Acted as Solution Architect for the end-to-end BYOD integration between the customer-facing solution, the B2B back-end system, and Salesforce Sales Cloud, enabling JB Hi-Fi Business to manage the sales process through a unified customer and transaction view.

Test Automation Lead | Jemena

Melbourne | January 2011 – June 2016

- Defined and implemented a test automation strategy based on HP UFT and integrated with HP Quality Center to execute tests and report results, enabling Go/No-Go decisions across SAP ERP, SAP HR/Payroll, SAP IS/U, WebMethods, and Energy Gateway. The strategy reduced testing execution time and helped project managers make informed decisions when transitioning from one testing stage to the next.
- Using the defined testing framework, engineered an enterprise test reporting mechanism by customising HP Quality Center and integrating HP Quality Center and Microsoft APIs. The

mechanism provided a daily testing progress dashboard that collected manual and automated testing results as well as defect tracking, giving internal and vendor project managers a real-time view to support program testing gates.
- Coordinated testing cycles, including engagement with business users during user acceptance testing, by organising testing phases according to the HP Quality Center foundation structure of releases and cycles. This aligned testing stages with the overall program plan.
- Built automated reporting tools that consolidated data from Microsoft Project, Microsoft Excel, HP Quality Center, and Jira to produce daily development and testing progress reports. This reduced weekly reporting effort across eight streams from approximately eight hours per team leader to minutes, saving more than 2,500 project management hours.

Earlier Career

Various Employers | August 1991 – January 2011

- Delivered senior technical consulting for Revolution IT/Wipro, customising HP Quality Center for multiple clients, implementing test automation suites, and delivering HP Quality Center and HP UFT training for end users and technical teams.
- Supported Transurban's BAU CRM Clarify environment, enhancing integration between the Clarify Microsoft SQL Server database and the Oracle-based tolling system.
- Led technical and functional consulting for Quanam PeopleSoft implementations across ERP, CRM, inventory, order management, and project costing, integrating PeopleSoft and Vantive with legacy systems using IBM MQSeries and customising solutions with PeopleCode, SQR, Application Engine, and nVision.
- Implemented Cognos BI and ETL solutions and delivered technical training across PeopleSoft and Cognos toolsets, strengthening reporting, integration, and internal technical capability.

Community & Independent Work

Salesforce Architect, Developer & Administrator (Mar 2020 – Dec 2023)

- Designed, deployed, and administered Salesforce NPSP, Sales Cloud, and Service Cloud solutions for community organisations including CCare, Maccabi Victoria, NCJWA, Souper Kitchen, Beit Raphael, FOJAM, and the John Monash Foundation, tailoring each implementation to operational needs.
- Built a Salesforce application for CCare that used recipient, household, and location data to calculate food parcel allocations and assign deliveries to volunteers for distribution.
- Developed an Omni-Channel-style fundraising application using Visualforce pages and Lightning Web Components to segment donors, assign calling lists to volunteers, capture donations as NPSP opportunities, and interface with Charidy funds collection. The solution supported campaign targets of $500,000 for Maccabi Victoria and $250,000 for NCJWA.
- Coached and mentored nonprofit administration teams to support sustainable low-code platform adoption and build internal independence.

Independent Application Development

.NET Architect & Full-Stack Developer (Oct 2015 – May 2016)

- Architected and developed a full-stack MVP using C#, VB.NET, SQL Server, and MVC Framework 5 to automate project-planning reports and validate the product concept.
- Built COM APIs to connect SQL Server, Microsoft Excel, and Microsoft Project, enabling automated project analytics and reporting.

Education & Professional Development

- Bachelor's degree in Systems Engineering | **Universidad Metropolitana, Venezuela** | 1990–1995
- Postgraduate in Business Administration | **Universidad Católica, Uruguay** | 1996–1997

Certificates & Languages

- Salesforce Platform Administrator – Certificate Number: 8129406
- Salesforce Platform Developer – Certificate Number: 8142823
- Claude Code
- PRINCE2
- ISTQB

- JB Leadership Program
- Bilingual proficiency: Spanish native, English professional
