Re: Application for Senior Technical Architect

Dear Hiring Team,

I am applying for the Senior Technical Architect role within Salesforce Professional Services. Across more than 30 years in engineering, architecture, and enterprise-platform delivery, I have combined executive advisory work, hands-on solution design, and delivery governance to turn complex business goals into executable transformation plans. My experience in the Australian Energy and Utilities sector, including Salesforce-enabled customer and operational journeys, positions me to help customers realise deeper value from Salesforce Industries across people, process, and technology.

I translate business strategy into executable technical plans while advising executives, delivery teams, and partners. At Origin Energy, I led Salesforce Sales Cloud and Service Cloud architecture, designed resilient integrations with Gentrack Velocity and Zuora using Platform Events, REST APIs, and asynchronous patterns, and built automated order scheduling for more than 50,000 points of delivery. I also reduced operational incidents by 90% through code refactoring and mapped complex sales journeys to Salesforce capabilities, ensuring strategic vision and providing technical governance, and hands-on delivery.

This experience aligns with five priorities of the Senior Technical Architect role:

- **Industry and domain alignment:** Extensive experience in the Australian Energy and Utilities sector through Origin Energy and Jemena, connecting customer and operational needs with process design and enabling technology. I have architected solutions supporting complex customer journeys, point-of-delivery management, asset tracking, and billing integrations.
- **Enterprise architecture and integration:** Proven capability in data modelling, Web Services, and enterprise application integration, including the design of resilient patterns connecting Salesforce with ERP, billing, and transactional back ends across distributed enterprise environments.
- **Delivery governance and technical integrity:** Established automated DevSecOps pipelines, GitHub Actions workflows, quality gates, and regression frameworks that reduced release-cycle time while protecting solution quality and architectural integrity throughout implementation.
- **Strategic leadership with hands-on execution:** Trusted by C-level and senior operational stakeholders to rationalise complex technical choices, while remaining actively involved in solution design, code reviews, Apex, Flow, and configuration to keep delivery aligned with business objectives.
- **Culture and community contribution:** Designed and delivered pro bono Salesforce solutions for non-profit organisations, improving operational workflows and community outreach while sharing platform knowledge in support of sustainable outcomes.

My Energy and Utilities expertise in complex customer journeys, billing and order integration, high-volume operations, and cross-platform governance is transferable to Telecommunications. I would rapidly deepen my sector knowledge through Salesforce enablement and collaboration with industry specialists.

With qualifications in Systems Engineering and Business Administration, I bring the architectural rigour, executive engagement, regional knowledge, and hands-on leadership to guide Salesforce Industries transformations, align delivery teams, govern implementation, and deliver measurable platform value.

Thank you for considering my application. I welcome the opportunity to discuss how my industry expertise, enterprise integration experience, and Salesforce leadership can advance customer success.

Yours sincerely,

Efrain Taranto
