Re: Application for Business Systems Lead

Dear Noluta,

I am applying for the Business Systems Lead position at MSI Australia. With more than 30 years' experience spanning systems engineering, enterprise platforms, application architecture, integration and digital transformation, I bring the combination of hands-on technical delivery and business analysis needed to optimise critical systems, lead an end-to-end CRM implementation and strengthen governance in a complex, regulated operating environment.

Across my career, I have translated operational, regulatory and stakeholder needs into secure, reliable and maintainable technology solutions. As Release Manager and Technical Lead at Origin Energy, I led system optimisation and process reviews across core enterprise platforms, refactoring critical workflows to remove bottlenecks, reduce reported production incidents by 90% and improve scalability. I have also designed and delivered Salesforce solutions for community-focused organisations, including Nonprofit Success Pack and Service Cloud implementations that improved service delivery, strengthened data governance and supported user adoption.

My experience aligns closely with the priorities of the role:

- **CRM and platform delivery:** Led end-to-end CRM and enterprise application initiatives covering configuration, data migration, testing, release management and continuous optimisation.
- **Requirements and process analysis:** Conducted workflow reviews, elicited business and technical requirements, and produced functional specifications, gap analyses, architecture recommendations and integration standards.
- **Data governance, privacy and security:** Applied data quality, access, retention and security controls within regulated environments, with a practical understanding of the Privacy Act 1988 and Australian Privacy Principles.
- **Integration, reporting and analytics:** Designed resilient integrations across multiple platforms and used SQL, data querying and business intelligence reporting to turn system data into actionable insights and dashboards.
- **Governance, vendors and delivery:** Managed competing priorities, upgrades and project pipelines while engaging vendors and senior stakeholders, supporting governance forums and communicating technical options in clear business terms.
- **Change leadership and capability building:** Developed implementation and training approaches, guided stakeholders without relying on direct authority, and coached technical specialists through complex delivery and support issues.

I am particularly drawn to MSI Australia's purpose of making reproductive choice easier and to its emphasis on integrity, agency, safety, quality and courage. I would bring a calm, collaborative and accountable approach to systems that support sensitive clinical and community services, ensuring technology decisions remain grounded in user needs, privacy, safety and measurable organisational benefit.

My bachelor's degree in Systems Engineering, postgraduate qualification in Business Administration, and PRINCE2 and ISTQB certifications complement this practical experience. I would welcome the opportunity to discuss how I can help MSI Australia optimise its application landscape, deliver its CRM and clinical systems priorities, and build sustainable capability across the organisation.

Yours sincerely,

Efraim Taranto
