Re: Software Application Engineer – Salesforce

Dear AGL Recruitment Team,

I am applying for AGL's Software Application Engineer – Salesforce role. I bring 13 years in the energy industry, including more than eight years building and supporting Salesforce solutions at Origin Energy, backed by enterprise test automation experience at Jemena. I bring hands-on capability across development, integration, automation, testing and release delivery.

At Origin, I developed Salesforce Sales and Service Cloud solutions using Apex, Flow, Platform Events, REST APIs and asynchronous processing. My work included billing integrations with Gentrack Velocity and Zuora, and billing and asset synchronisation with SAP. I handled mapping, validation, testing, error management and defect resolution, while refactoring order, account, delivery-point, asset and invoicing automation to eliminate 90% of reported incidents. I also built an order scheduler supporting more than 50,000 LPG delivery points and saving over 3,000 configuration hours each year.

I built a custom Salesforce application that orchestrated DevSecOps workflows through GitHub Actions, GitHub Copilot-assisted peer review, regression testing and Snyk compliance checks, enabling deployments every 15 hours instead of fortnightly change sets. At Jemena, I implemented automated testing and reporting across SAP ERP, SAP HR/Payroll, SAP IS/U, WebMethods and Energy Gateway, giving me practical experience validating complex enterprise integrations.

AGL's focus on electrification, renewable energy and continuous improvement is a strong fit for my experience. I would bring practical Salesforce engineering, disciplined automation and a clear understanding of energy-sector systems to help AGL deliver scalable, reliable solutions and better customer outcomes.

Kind regards,

Efraim Taranto
