To: **Xero - Hiring Manager**

Re: **Lead Platform Engineer – Salesforce**

Dear Hiring Team,

I am applying for the Lead Platform Engineer - Salesforce role at Xero. I bring enterprise-scale Salesforce leadership and hands-on experience across platform architecture, software development, test automation and operational support. Throughout my career, I have translated complex organisational needs into secure, sustainable platform improvements, creating the technical foundations, governance and tooling that enable engineering teams to deliver independently while maintaining quality and operational discipline.

In my most recent role, I led Salesforce DevSecOps and release engineering across multiple orgs, vendors and business units. I modernised CI/CD with human review, GitHub Copilot, Snyk checks and automated regression testing, reducing post-release incidents by approximately 90% and enabling teams to manage scheduled, off-cycle and hotfix releases independently. I remained hands-on development, resolving governor-limit constraints, migrating legacy automation to bulkified Flow and introducing Selenium-Cucumber BDD testing executing real user-acceptance scenarios,

At Origin Energy, working along with Business Users and SMEs, I designed and architected the LPG Sales Pipeline Accelerator, identifying practical applications for Agentforce in field sales and for Data360 in lead revival, acquisition, retention and next-best-action use cases. I also designed and developed a recurring gas-delivery solution that automated customer orders according to predefined demand conditions. These initiatives required me to translate emerging platform capabilities and complex operational requirements into practical, scalable solutions.

I assess each initiative by the value it creates for the organisation, including delivery speed, operational savings, risk reduction and the capabilities it enables next. This systems-level perspective helps me sequence work so that immediate improvements also establish the foundations for future business and platform requirements.

Across these roles, I have treated security, release quality and operational resilience as platform-wide responsibilities rather than project-level checks. My experience embedding security compliance into CI/CD, resolving Salesforce governor-limit constraints and strengthening automated regression coverage has helped teams identify risk earlier and operate the platform more reliably at scale.

I lead with a collaborative, service-oriented approach. I have mentored cross-functional teams, introduced Agile Scrumban practices, guided architecture and delivery decisions, and coached engineers to take greater ownership within clear standards. I work closely with engineering managers and stakeholders to translate broad goals into sequenced and incremental deliveries; delegate effectively providing all necessary support and remain hands-on where my contribution creates the greatest leverage.

Based in Melbourne, I am well placed to support Xero's hybrid working model and collaborate in person on strategic initiatives. I would welcome the opportunity to discuss how my Salesforce platform leadership, hands-on development, test automation and release-engineering experience could help Xero strengthen its platform foundations and enable engineering teams to deliver safely, reliably and confidently at scale.

Kind regards,

Efraim Taranto
