

Efraim Taranto

Mobile: 0423 117 781 | Email: tarantoe@outlook.com | Address: 30 Parker St. Ormond

Professional Profile

IT delivery professional with extensive experience across release management, DevSecOps, test automation, technical leadership, solution delivery and hands-on development. Proven ability to modernise delivery practices, establish scalable CI/CD and automation frameworks, lead cross-functional teams, and translate complex business needs into reliable technology outcomes across energy, retail, transport, not-for-profit and enterprise environments.

Key Skills

- Salesforce Release Management, DevSecOps and CI/CD delivery
- Salesforce Sales Cloud, Service Cloud, Field Service, Vlocity CPQ, Apttus and NPSP
- Technical leadership, mentoring, coaching and Agile/Scrumban delivery
- Test automation, regression testing, load testing and quality engineering
- Integration design using REST APIs, AWS, CTI/IVR and enterprise platforms
- Platform optimisation, refactoring, governance and delivery guardrails
- Stakeholder engagement across business units, vendors and delivery teams

Professional Experience

Origin Energy

As Australia's largest energy retailer, Origin has over 4 million customers, servicing both large energy customers and the residential and small business market. Product and service offerings include electricity, natural gas and LPG

Feb 2018 – Jun 2026 | Salesforce Release Manager and Technical Lead

Role outcome: established a robust Salesforce release and DevSecOps operating model, supported by clear guardrails, automation and AI-assisted practices. This enabled release activities to be performed confidently by the broader team and reduced dependency on a single centralised release manager.

Key Responsibilities

- Established and maintained Origin's Salesforce DevSecOps and release management pipeline across multiple technologies, vendors and environments.
- Provided technical guidance for BAU delivery and major Salesforce initiatives, including Vlocity CPQ, Case Management and Field Service.
- Led development teams by setting technical direction, planning delivery activities, mentoring team members and supporting continuous improvement.
- Engaged with business units to advise on Salesforce initiatives, resolve incidents and support platform adoption.
- Ensured development and deployment practices aligned with Origin standards, Salesforce governance and platform guardrails.

- Maintained seven Salesforce development and testing environments in line with Salesforce DevOps guidelines.
- Remained hands-on with platform delivery, including production deployments and feature development.

Selected Achievements

- Democratised Salesforce release management by standardising processes, tools and AI guardrails so developers, business analysts and testers could organise scheduled, off-cycle and hotfix releases without relying on a single release manager.
- Enhanced the DevSecOps pipeline by moving from fortnightly change-set deployments to a technical deployment cycle capable of completing in approximately 15 hours, while maintaining a weekly release cadence to support change management.
- Delivered an end-to-end recurring gas delivery order scheduler in Salesforce, acting as developer, architect and scrum master while coordinating functional, testing and product resources.
- Designed Sales Process (Sales Performance Pipeline Accelerator) leveraged by Salesforce Data360 and Agentforce.
- Refactored the Salesforce Sales Cloud platform using Salesforce Enterprise Patterns, improving performance and creating a stronger foundation for future development.
- Managed and contributed hands-on to the migration of Process Builders and Workflow Rules into modern, bulkified Salesforce Flow solutions.
- Developed a custom application within Salesforce to manage and support the established CI/CD process across five different Salesforce Orgs, allowing weekly schedule releases and increasing the number of releases on demand.
- Implemented automated regression testing that reduced post-release production incidents by approximately 90%.
- Established a Salesforce team operating model aligned with Agile Scrumban, enabling squads to support Solar Sales, LPG, Business Energy and Future Energy with flexible resource allocation.
- Optimised the original Sales Cloud, Service Cloud and Apttus implementation by resolving governor-limit issues, improving workflows, Apex classes and triggers, and enabling the platform to move fully to Lightning.
- Migrated all users in the platform to Lightning, which allowed the Sales Team to use different custom lightning components on the Lead Nurturing process and Omni Channel for the Tele Sales team.
- Enabled the Business Energy Business Unit, Sales and Marketing teams with Salesforce Sales Cloud and Pardot while developing a real-time interface with Gentrack Velocity Billing System. This project allowed the Business Unit to work with a CRM for the first time while enabling the automated marketing campaign to reach significant businesses.
- Assisted on the Implementation of Pendula as Marketing Platform for the Solar Sales Business Unit, which integrated with Sales Cloud and Apttus, has provided the Sales team with the capability of reaching new leads and increasing the conversion rate.

- Supported the Release Capability of the LPG Remediation and Stabilisation project carried out by executing the Warranty provided by System Partners.
- Established the CI/CD capability for Salesforce by introducing the version control system supported by GIT BitBucket and developing the CI processes using GearSet and AutoRabit.
- Enabling integration between Salesforce and AWS CTI Connect (Smart IVR) and providing automation for inbound and outbound telephony.
- Enabling integration between the Origin Digital Portal and Salesforce using REST API.

JB Hi-Fi

JB Hi-Fi, combined with the latest Acquisition of The Good Guys, is the largest electronic goods retailer in Australia, offers the world's leading brands of Computers, Tablets, Games and Whites through over 300 stores and online.

Dec/2016 – Feb/2018: Salesforce Iteration Manager

Jul/2016 – Dec/2016: Test Automation Lead

Role focus: led Salesforce iteration delivery and digital test automation across Salesforce Sales Cloud, JB Hi-Fi commercial web platforms and the BYOD education channel.

Key Responsibilities

- Led a team of three developers, one tester and one business analyst across Salesforce Sales Cloud, the JB Hi-Fi commercial website and the BYOD website, while providing mentoring and coaching.
- Established an automation testing framework using Selenium Java and Cucumber.
- Enabled load testing by extending functional automation assets into JMeter and BlazeMeter scripts.

Selected Achievements

- Developed a Selenium Java test automation framework that reduced release testing effort across the digital platform.
- Scaled automated test components into JMeter scripts supporting load tests from five concurrent users to up to 50,000 concurrent users using BlazeMeter, helping tune AWS-hosted web platforms for Black Friday and Boxing Day traffic.
- Delivered the BYOD project, enabling JB Hi-Fi Education to approach schools with personalised device offers.
- Enabled Salesforce integration with external procurement systems, reducing the cost of doing business with major corporate customers while strengthening security and audit controls for commercial transactions.

Jemena

Jemena is an Australian company that owns, manages or operates energy infrastructure assets in the eastern states of Australia, including Queensland and New South Wales, and gas pipelines and gas and electricity distribution networks in Victoria and the Northern Territory

Jan/2011 – Jul/2016: Test Automation Lead

Role focus: led test automation, test strategy and delivery reporting for enterprise programs across SAP ERP, SAP HR/Payroll, SAP IS/U and PMO-led initiatives.

Key Responsibilities

- Led and mentored a team of four automation testers.
- Defined test strategy and planning across automated and manual testing activities.
- Coordinated testing cycles, including engagement with business users during user acceptance testing.
- Established a reporting framework to monitor testing progress and overall project delivery status.
- Established and maintained test automation frameworks for Project Management Office initiatives.

Selected Achievements

- Built automated reporting tools that consolidated data from Microsoft Project, Microsoft Excel, HP Quality Centre and Jira to produce daily development and testing progress reports, reducing weekly reporting effort across eight streams from approximately four hours per team leader to minutes.
- Delivered automation suites for PMO projects, including progression and regression testing for SAP ERP, SAP HR/Payroll and SAP IS/U, accelerating defect detection and allowing manual testers to focus on higher-value quality activities.

Revolution IT

Revolution IT is a company specialising in software, mobile, web and cloud-based testing and has provided quality assurance solutions to over 500 clients across Australia.

Jun/2008 – Jan/2011: Senior Technical Consultant

Role focus: delivered quality-engineering consulting services, combining manual testing, automation, reporting and test-driven delivery practices for client projects.

Key Responsibilities

- Established cost-effective testing frameworks combining manual and automated testing approaches.
- Participated in requirements grooming sessions with business analysts and developers, providing guidance on test-driven development practices.
- Established test automation frameworks using HP UFT / QTP.

Selected Achievements

- Developed the test automation suite for Australia Post Identification Services, covering end-to-end testing of customised identification forms for multiple government agencies.
- Created a reporting framework for Revolution IT by integrating timesheet data with MYOB, enabling financial performance reporting per consultant and improving resource-allocation decisions.

EastLink

EastLink is a tolled section of the M3 freeway linking a large area through Melbourne, Australia's eastern and south-eastern suburbs. It is a part of Melbourne's Metropolitan Ring Road project

May/2006 – Jun/2008: Test Automation Lead

Jul/2005 – May/2006: Requirement Engineer

Role focus: supported the requirements, traceability and test automation capabilities required to deliver the EastLink Toll Operating System and related enterprise platforms.

Key Responsibilities

- Captured business and system requirements for the development and implementation of the EastLink Toll Operating System.
- Led and mentored four automation testers across tolling, SAP and web-portal testing activities.
- Maintained requirements traceability from business needs through development components and test coverage.

Selected Achievements

- Defined system requirements and traced them to development components using a test-driven development approach and a detailed HP Quality Centre traceability matrix, supporting compliance with Victorian Government requirements.
- Developed the test automation suite for the Toll Operating System, SAP IS/U and web portal, accelerating testing cycles and supporting earlier system delivery.

Transurban

Transurban is a road operator company that manages and develops urban toll road networks in Australia and North America

Nov/2004 – Jun/2005: Software Engineer

Role focus: supported and enhanced Transurban's Clarify CRM platform and integration capabilities across SQL Server, Oracle and tolling systems.

Key Responsibilities

- Supported and developed enhancements for the Transurban Clarify CRM system.
- Developed data-handling and integration capabilities across CRM and tolling platforms while supporting secure development and testing practices.

Selected Achievements

- Implemented server-side data-masking processes in Clarify to prevent private customer information from being exposed in development and testing environments.
- Developed a configurable integration between the Clarify SQL Server database and the Oracle-based Toll Operating System.

Quanam (Argentina)

Quanam is a knowledge and innovation company capable of offering in any country within Latin America, and even in remote countries, talent and experience for overcoming the greatest business challenges.

Mar/1997 – Aug/2004: PeopleSoft Technical Consultant

Role focus: delivered PeopleSoft and Business Intelligence implementations across financial services, insurance, telecommunications and pharmaceutical clients in Latin America.

Key Responsibilities

- Managed technical delivery across PeopleSoft and Business Intelligence projects, including configuration, integration, reporting and client-facing implementation activities.
- Worked with client stakeholders to translate business requirements into enterprise application, reporting and integration solutions.

Selected Achievements

- Implemented PeopleSoft Financials for Banco Nación Argentina, covering General Ledger, Accounts Payable and Inventory.
- Implemented Cognos Business Intelligence cubes for Novartis Argentina by consolidating information from multiple sales systems and developing SQL Server ETL processes integrated with Cognos DataStream.
- Implemented PeopleSoft CRM for Metropolitan Life in Argentina and integrated it with the legacy insurance platform using IBM MQ Series.
- Implemented PeopleSoft CRM for BellSouth operations in Peru and Ecuador.

Additional Experience, Personal Ventures and Community Salesforce Support

CHAIT

Starting by helping a no-profit organisation during the first COVID-19 lockdown, we developed a self-sustaining model for no-profit based on government grants and donations to support IT initiatives for small organisations. Most of the work carried out was donated as my way to give back to the community.

Mar 2020 – Dec 2023 | Salesforce Architect, Developer and Administrator

Role focus: provided Salesforce architecture, development, administration and mentoring support to not-for-profit organisations, enabling practical CRM, volunteer, donor and service-delivery capabilities with limited budgets.

Key Responsibilities

- Acted as Salesforce architect, developer and administrator across multiple not-for-profit implementations.
- Designed practical Salesforce NPSP, Sales Cloud and Service Cloud solutions for donor management, volunteer coordination, food delivery, event registration and scholarship management.
- Mentored community organisation teams and supported adoption so solutions could be maintained by volunteers and small administration teams.

Selected Achievements

- **CCare:** Developed Salesforce Sales Cloud and NPSP customisations to schedule food-package preparation and delivery, manage recipients and organise volunteer shifts through online registration.
- **Maccabi Victoria:** Implemented Salesforce Service Cloud and NPSP to manage members and donations, including a custom volunteer calling application for annual donation campaigns, and supported the transition to Office 365 during COVID-19 lockdown operations.
- **NCJWA:** Built a Salesforce app on Sales Cloud and NPSP to help volunteers contact potential donors during annual fundraising campaigns.
 - **Souper Kitchen:** Adopted Salesforce NPSP to manage volunteers and food delivery using a model aligned with the CCare implementation.
- **FOJAM:** Implemented Salesforce NPSP and event-management capabilities to manage constituents, registrations and post-event engagement.
- **Beit Raphael:** Implemented Salesforce NPSP to organise volunteers, with a focus on mentoring, coaching and sustainable internal adoption.
- **John Monash Foundation:** Implemented Salesforce NPSP and Sales Cloud to manage volunteers and scholarship recipients.

Afore

Afore was a personal endeavour inspired by achieving Project Planning Optimisation by automating the reporting capability at Jemena. Although it was a failed start-up, it helped me develop knowledge and understanding of the .NET framework using VB.NET and C# while leveraging my knowledge of SQL Server.

Oct/2015 – May/2016: .NET Architect & Developer

Role focus: designed and built a project-planning optimisation product concept, combining .NET development, SQL Server database design and AWS hosting to automate project reporting and data exchange.

Key Responsibilities

- Acted as sole .NET architect, SQL Server database administrator and C# / VB.NET developer for the product prototype.
- Designed the application architecture, database model, integration layer and user interface required to automate project-planning reporting.

Selected Achievements

- Created COM APIs to enable communication between SQL Server, Microsoft Excel and Microsoft Project, supporting project data representation through standard project-management tools.
- Developed the application front end using C#, MVC Framework 5 and JavaScript, supported by a VB.NET back-office interface.

Hosted the application and database server on AWS to validate a scalable hosting model for potential customers.

Various

Early career development roles across organisations in Venezuela and Uruguay, providing a strong foundation in software engineering, database development and enterprise application support.

Aug 1991 – Mar 1997 | Software Developer

Role focus: built and supported business applications across multiple technology stacks, establishing broad development experience before moving into enterprise consulting.

Key Responsibilities

- Developed and maintained business applications using COBOL, PowerBuilder, SQL Windows, Java, C++, Visual Basic and related database technologies.
- Supported database development and application delivery using MS Access, SQL Windows, Microsoft SQL Server, Oracle and Informix.

Selected Achievements

- Built a broad technical foundation across programming languages, databases and application platforms that later supported enterprise CRM, ERP, automation and integration delivery.
- Developed an early payroll automation tool for a small business using Turbo Pascal, replacing manual weekly payment calculations and demonstrating the operational value of automation. The solution remained in use for more than five years.
- Built a Microsoft Access 2.0 application to support a regulatory foreign-exchange process introduced by the Venezuelan government. The solution helped the organisation track applications, statuses and outcomes during a critical compliance change and continued supporting operations for more than two years.

Education

Catholic University, Montevideo – Uruguay

1996 – 1997: Postgraduate in Business Administration

Metropolitan University, Caracas – Venezuela

1990 – 1995: System Engineer

Certifications and Professional Development

- Salesforce Trailhead Ranger: 172 badges
- JB Leadership Program
- ISTQB
- PRINCE2
