Re: Salesforce Development Lead

Dear Hiring Team,

I am pleased to express my interest in the Salesforce Development Lead role at RACV, where I can combine my technology leadership experience with a practical, delivery-focused approach to enterprise platform outcomes.

I bring extensive experience across technology delivery, engineering, architecture, enterprise platforms and transformation, with a track record of leading technical teams to deliver reliable, scalable business solutions. I am applying for the Salesforce Development Lead role because it aligns closely with the work I do best: guiding delivery teams, shaping practical solution approaches, resolving complex technical issues and ensuring platform outcomes support both customer experience and long-term enterprise architecture.

My strength is leading the link between business intent and technical delivery. Across enterprise platform and transformation environments, I have worked with architects, product owners, delivery leads, developers and stakeholders to turn priorities into well-governed technology outcomes. I focus on creating clarity for teams, managing delivery dependencies, and maintaining technical integrity while keeping business value and customer impact at the centre of decision-making.

In technology leadership and delivery roles, I have guided teams through solution design, development governance, technical review and issue resolution. My leadership style is practical and hands-on: I set clear engineering expectations, support developers through coaching and review, and step into troubleshooting, proof-of-concepts or complex delivery work when needed. This allows me to help teams maintain momentum while improving quality, consistency and confidence in the platform.

My enterprise platform background has given me strong appreciation for the principles that matter in a Salesforce leadership role: maintainable design, secure integration patterns, reliable release practices, strong governance and alignment with architectural direction. I am comfortable working across modern engineering practices, CI/CD, integration models and customer-facing platforms, and I would bring that same disciplined approach to Salesforce Experience Cloud, Service Cloud, LWC, Apex, Omni-Channel and AI-enabled service capabilities.

I would welcome the opportunity to bring my technical delivery leadership, enterprise platform experience and collaborative working style to RACV's Salesforce team. I am confident I can help strengthen delivery practices, support developers, work effectively with architects and product teams, and contribute to Salesforce solutions that improve digital service experiences for RACV members.

Kind regards,

Efraim Taranto
