The Ronin Consulting

Re: **Technical Lead**

Dear Charles,

I am writing to express my interest in the Technical Lead opportunity with The Ronin Consulting's client. The role strongly aligns with my background as a hands-on developer, Salesforce specialist and technology lead, particularly where practical systems development can improve essential community services.

Across more than 30 years in software development, systems engineering, architecture and enterprise platforms, I have designed and built solutions that turn complex service and business needs into reliable production capability. At Origin Energy, I led and delivered Salesforce Sales and Service Cloud work across Apex, Flow, integrations, data validation, testing and vendor engagement, while remaining close to hands-on development and technical decision-making.

My strongest alignment with this opportunity is my nonprofit and pro bono Salesforce development experience. I designed, developed and administered Salesforce NPSP, Sales Cloud and Service Cloud solutions for community organisations including CCare, Maccabi Victoria, NCJWA, Souper Kitchen, Beit Raphael, FOJAM and the John Monash Foundation. For CCare, I built a Salesforce application that calculated household food parcel allocations and coordinated volunteer deliveries during the COVID-19 response, showing how pragmatic development can directly support vulnerable people and frontline service delivery.

I also bring broad development and integration capability across Salesforce triggers, flows, custom applications, Platform Events, REST APIs, asynchronous processing, .NET, C#, VB.NET, SQL Server, MVC, Power Apps and SharePoint. My DevOps experience supports this development focus by making delivery safer, faster and more repeatable through peer review, repository-based approvals, regression testing and security checks.

I would bring a calm, structured and collaborative approach, with the technical credibility to guide decisions across Salesforce, data, integrations, identity, cloud and vendor-delivered solutions. I am comfortable leading without relying on formal authority and would welcome the opportunity to help your client shape technology that is secure, scalable, supportable and genuinely useful to the people it serves.

Kind regards,

Efraim Taranto
