To: Nitika Singh, Hays
Re: Senior Salesforce Development

Dear Nitika,

I am writing to apply for the Senior Salesforce Development role advertised by Hays. I offer more than 30 years of technology and delivery experience, including eight years leading Salesforce release, architecture, development and optimisation work in complex enterprise environments. My background combines hands-on engineering with the technical leadership needed to guide multidisciplinary teams and deliver secure, scalable and maintainable solutions aligned with business and architectural requirements.

At Origin Energy, I provided hands-on technical leadership across Salesforce Sales and Service Cloud, translating complex energy-retail requirements into reliable production capability. I led solution design and delivery across Apex, Flow, configuration, data validation and integrations with Gentrack Velocity using Platform Events, REST APIs, asynchronous processing and robust error-handling patterns. I also optimised triggers and flows affecting orders, accounts, assets and invoicing, resolving performance issues, closing 90% of reported incidents and creating capacity for platform growth.

I have a strong record of improving engineering practices and team capability. I established a Salesforce DevSecOps capability that introduced repository-based approvals, peer review, regression testing and Snyk compliance checks, transforming an unstructured fortnightly change-set process into a hybrid automated CI/CD pipeline capable of deployment every 15 hours. I have also overseen Git-based release processes, reviewed and approved production changes, coached nonprofit Salesforce teams, and worked closely with business, architecture, testing and vendor stakeholders to coordinate high-quality delivery.

My broader Salesforce experience includes Sales Cloud, Service Cloud, Lightning Web Components, Visualforce, APIs and community-focused NPSP implementations, supported by Salesforce Platform Administrator and Platform Developer certifications. While my resume does not claim direct OmniStudio, Vlocity, Health Cloud or Experience Cloud implementation experience, my depth in object-oriented development, enterprise integration, architecture and platform delivery would enable me to become productive quickly in those areas.

I would welcome the opportunity to discuss how my Salesforce technical leadership, pragmatic problem-solving and continuous-improvement mindset could support your client’s delivery teams. Thank you for considering my application.

Kind regards,

Efraim Taranto
